National Emergency Management Plan (NEMP)

Guidelines & Instructions

1 NEMP Rationale

Having an approved National Emergency Management Plan (NEMP) for a Country Office offers several operational benefits:

1. Planning and Preparedness: The NEMP is a vital component of an office's disaster planning and preparedness.

2. Action Guidance: It serves as a clear action plan for the office during a disaster event.

3. Effective Communication: The NEMP facilitates effective communication of the emergency response plan to the ADRA Network, the Seventh-day Adventist church, associated institutions, national and local government authorities, as well as key partners and stakeholders.

4. Efficient Response: It enables a timely, cost-effective, and efficient initial response to a disaster event.

5. Operational Presence: The NEMP helps the office quickly establish operational presence, potentially attracting additional funding.

6. Local Capacity-Building: It supports local engagement by building the capacity of local partners in NEMP development, allowing the office to tailor plans to their unique situation.

As for for which Country Offices are required to have an approved NEMP, all ADRA Accredited offices are mandated to have one, unless their governing Board formally exempts them. ADRA/I EMU should be informed of such exemptions, as specified in the EM Ops Manual.

Additionally, offices with an approved NEMP enjoy the advantage of pre-approval for funding for initial responses up to $20,000 USD, provided the response aligns with the NEMP's plan. This streamlines the response process and eases the workload on staff during emergencies.

2 Developing the NEMP - A Participatory Process

To ensure effective emergency preparedness, it's crucial to involve a diverse team rather than relying on one individual. The National Emergency Management Plan (NEMP) should be a collaborative effort. We recommend forming an interdisciplinary team right from the beginning to oversee NEMP development, with a designated ADRA staff member leading this team. Their primary responsibility is to guide and supervise the NEMP's creation.

This team doesn't have to consist of the same staff who will execute the plan during an emergency, but their input can be valuable. The NEMP's development should involve consultations with experienced ADRA staff, key partners, stakeholders, and external entities like national and local governments, UN partners, cluster leads, embassies, and other NGOs.

When developing the NEMP, consider the following approach:
1. Appoint one person to manage the NEMP's development, setting a clear timeframe for completion.
2. This manager can delegate specific sections of the NEMP to relevant team members. For instance, finance experts can handle the budget section.
3. If your region has an Emergency Coordinator, collaborate with them and seek guidance as needed.

3 NEMP Approval Process

The approval process for a National Emergency Management Plan (NEMP) involves several key steps:

Initial NEMP Approval:
a) The NEMP is submitted to the Regional Office/ADRA I EMU for review before being submitted to the Country Office Board for approval. It's crucial that the Board understands that by approving the NEMP, they commit to providing local matching funding of
$3,000 for each emergency response under the NEMP.
b) The Board-approved NEMP is then sent to the Regional/Division Office (RDO) for approval by their ADCOM and then to ADRA International for ADCOM approval. Only after obtaining approval at all three levels is the NEMP fully approved for activation. The reason for approval being required at three levels is that each entity is making a financial commitment when a NEMP intervention is activated i.e. in essence they are approving in advance the proposed interventions.

Annual or Post-Activation Review:
The NEMP must undergo a review and update either annually or after activation to incorporate lessons learned. If the changes are minor, such as staff and stakeholder contact updates without altering intervention content, an updated copy is shared with the Country Office Board, RDO, and ADRA I EMU for acknowledgment.
Note: Each intervention should serve a minimum of 75 households, with at least 67% of costs allocated to relief aid and a maximum of 33% for supporting expenses.

If the changes are significant, like alterations to the interventions provided or notable shifts in country risks (e.g., civil unrest or war), the revised NEMP must follow the same approval process as a new NEMP.

Five-Year Review:
Every five years, a major review of the NEMP takes place, requiring a formal re-approval process as described in point #1. This review is conducted by the Country Office with guidance from the Senior Manager for Emergency Preparedness at ADRA I EMU. It's advisable to initiate the major NEMP review at least three months before its expiry date to ensure completion before the five-year deadline. NEMPs that have passed the five-year expiry deadline (from the date of local board approval) will not be eligible for activation.

In summary, the NEMP approval process involves three levels of approval - Country Office Board, Regional Office, and ADRA International - to ensure financial commitment alignment with proposed interventions during NEMP activation.

I Activating the NEMP

1. Meaning of "Activating the NEMP":
Activating the NEMP signifies that the Country Office is requesting to initiate a response per one of the approved NEMP menu responses to an emergency event that aligns with the NEMP's approved criteria. This eliminates the need to prepare an initial response budget and proposal during the critical aftermath of an emergency.

2. Activation Criteria:
The NEMP contains criteria for activation, including global standards and local office-specific criteria. If these criteria are met, the NEMP can be requested to be activated.

3. NEMP Activation Process:
To activate the NEMP, the Country Office's emergency focal person(s) assess the situation. They complete the NEMP Activation Notification form, sending it to EMU at ADRA/I with copies to the Regional Office. The SitRep and bank account details must accompany the Activation form. If approved, the selected intervention is then executed following the NEMP guidelines.

4. Post-Activation Requirements:
After formally activating the NEMP, the chosen intervention must be implemented according to the NEMP's specifications. All costs, beneficiary information, and distribution records must be meticulously maintained. Photographic documentation illustrating ADRA's involvement is essential. Implementation should conclude within 60 days of intervention approval, and a final report must be submitted to EMU at ADRA/I (with a copy to the regional office) no later than 30 days after intervention completion.

5. Lack of an Approved NEMP During a Disaster:
If an ADRA Accredited office doesn't have an approved National Emergency Management Plan (NEMP) and needs funds for an initial emergency response (up to $20,000 USD), they must create an initial response proposal using ENET templates and gain approval from ADRA/I's EMU before implementation.

5 Scaling-up the NEMP

For Category 2 or 3 disasters, NEMPs can be scaled up to a higher budget based on the humanitarian need, country office capacity, and funding availability, collectively decided by EMU and the Regional Office. This entails increasing the budget for one of the NEMP interventions to align with the available funds. Three key factors determine the scale of the NEMP: the affected population's needs, the Country Office's capacity (potentially enhanced by ERT deployment), and available funds.

Process of Scaling-up:
Once the available funding is determined, the budget for the selected NEMP intervention is proportionately increased to match the funding. Some budget lines may vary due to economies of scale, such as reduced transportation costs for larger quantities of goods. EMU at ADRA/I reviews and approves the scaled-up intervention and budget before implementation.

Documentation for Scaled-up NEMP:
For scaled-up NEMP responses up to $100,000, the following documents are required:
a) Approved NEMP
b) Revised budget for the agreed value (Network Proposal budget template)
c) Current SitRep (ADRA-approved template)

For scaled-up NEMP responses exceeding $100,000, a full external audit report must be submitted as well.

Reporting for Scaled-up NEMP:
Reporting requirements for all scaled-up NEMP responses are the same as those for Network Projects.

6 Updating the NEMP

Ideally, the National Emergency Management Plan (NEMP) should be a dynamic, continuously evolving document, updated as needed. However, at a minimum:

Sections with orange headings, which contain information likely to change within a year, should be updated annually. All other sections should undergo review once every five years.

National Emergency Management Plan: ADRA [Mexico].

Context and Risk Analysis

1.1 Known Natural Hazards (rapid and also slow onset disasters) - Please insert additional rows if needed

This is a brief analysis of hazards your country is exposed to, based on data available locally and on the internet.
Natural Hazard: a naturally occurring phenomenon that has the potential to impact communities and the human environment e.g. cyclone, earthquake, volcano
Exposure/Frequency: when might these phenomenon happen (exposure) and how often do they occur (frequency). Examples: 1) cyclones happen during the cyclone season (e.g. Nov - Apr) and on average affect the country once every three years, 2) earthquakes can happen anytime and on average a significant, damaging earthquake occurs every 50 years.
Location: which parts of the country do the known hazards typically impact
Past history: provide 1 - 2 examples of recent significant disasters caused by the identified hazard.
Note: a map showing where these hazards are prevalent in your country must be uploaded in the Appendices section.

Number	Hazard Type	Exposure/ Frequency	Location	Past History of Disasters
1	Cyclone/Hurricane/Typhoon	May - Dec	Pacific Coastal	Hurricane OTIS (Nov 2023), Acapulco (Guerrero State), 1.2M people affected, 100 dead, 550 injured, $1B in losses.
2	Earthquake	All year round	Mexico City,Oaxaca,Chiapas,Guerrero ,Morelos,Veracruz	Earthquake of magnitude 8.3 on the Richter scale (Chiapas, Tabasco, Oaxaca), more than 100 dead and thousands injured, more than 50,000 houses affected and damage to public infrastructure such as schools, hospitals, highways, etc.
3	Flooding	June - Dec	Coastal States	Veracruz May 2017- 53 municipalities affected, 3 dead, 370 houses flooded, 65 landslides and 77,000 people without electricity supply.
4	Drought	All year round	Sonora,Sinaloa,Nuevo León,Veracruz,Tamaulipas	In the State of Veracruz in 2024, 88.1% of the territory was affected by drought. As a result, 50% of the population was in urgent need of water and food. In addition, 35% of the people required financial support to acquire basic supplies and/or recover their livelihoods, while 15% needed medicines.
5	Volcano	All year round	Puebla,Colima	Colima Volcano the last explosion was in January 2017 where the previous domes were destroyed by explosions and exhalations.

Note: *The above identified hazards can be visualised on the country map in the Appendices*

1.2 Man-Made Disasters (Past, Present or Anticipated - Include Conflict Situations) - Please insert additional rows if needed

Number	Risk Factors, Root Causes, Triggers (e.g. Elections, Ethnic Tensions, Political Instability, Civil Unrest, etc.)	Date	Location (Province, City)	Reported Impact (Deaths, Economic Costs, etc.)
1	Widespread violence	January - To date	State of Chiapas,Tamaulipas,Guerrero and Michoacan	400 dead; 7,900 people displaced.
2	Internal Displacement	Indefinite	Oaxaca,Chiapas,Guerrero and Michoacan	386 thousand internally displaced persons in Mexico in 2022
3	Mixed Migration (Foreign)	2017-Till date	Chiapas,Tijuana,Sonora, Chihuahua,Tamaulipas,Oaxaca	113 thousand Venezuelan migrants and refugees; 2000+ caravans between 2017 - 2024 entry through the southern border (Chiapas).

Note: *The above identified hazards can be visualised on the country map in appendix number:*

Resources Analysis

2.1 Additional Staffing Capacity from Partners and Volunteers

Relationships already in place with partners, church volunteers, SDA organisations, health organisations, that can bring additional expertise and capacity

To provide for staff surge capacity, offices often develop relationships with other organizations to supplement staffing requirements. For this reason, it is vital that relationships with partners are continuously maintained.

Complete the following information in the NEMP:
a. List the organizations and partners that can provide additional staffing capacity if needed.
b. Indicate the type of arrangement in place with the partner. That can be an MOU (memorandum of understanding), standing arrangement, ad hoc, contractual, etc. Please attach a copy of agreements.
c. Identify the primary (or main) area of expertise provided by the organization.
d. Complete contact details for the focal point of contact at the organisation.

Organization	Type of Relationship/Partnership	Expertise/Capacity	Contact's Name	Contact's Phone	Contact's Email
Mexican Union Central	Memorandum of Understanding (MoU)	Volunteering	Ptr Edgar Benitez	5555087196	ebenitez@umc.org.mx
Mexican Union Southeast	Memorandum of Understanding (MoU)	Volunteering	Ptr Alejandro Castle	9992336918	acastillo@unionsureste.org.mx
Mexican Union North	Memorandum of Understanding (MoU)	Volunteering	Dr Roel Cea	8261279425	cearo@adventistasumn.org
Mexican Union Chiapas	Memorandum of Understanding (MoU)	Volunteering	Ptr Ivan Reyes	9611365759	luis.reyes@umch.org.mx
Mexican Union Interoceanic	Memorandum of Understanding (MoU)	Volunteering	Dr Jennifer Esparza	2224267655	jesparza@interoceanica.org.mx
Save the Children	Collaboration Agreement	Funds	Fatima Andriaca	5510787158	fatima.andriaca@savethechildren.org
World Vision	Collaboration Agreement	Funds	Adilene Santos	9612696625	Adilene_Santos@wvi.org
Chain	Collaboration Agreement	Funds/Volunteers	Liora Pupko	5525603500	liora@cadena.ngo

2.2 Coordination Arrangements

Partnerships need to be established well in advance of an emergency. Establishing clear mechanisms for coordination before an emergency is critical for an effective humanitarian response. The existence of cluster/working groups/government forums for planning and preparedness varies from one country to another. Once the cluster/working groups have been identified, decide which Sector/Cluster/Group ADRA will participate in. This decision should be based on previous experience, qualified personnel and capacity for the respective clusters/groups that ADRA decides to join. It is vital that ADRA regularly participates in cluster and working group meetings, both before and during an emergency response.

Complete the following information in the NEMP:
a. Identify and list Cluster/Group: Provide information only to the working clusters in your country. If there are other working groups, please add them in the "Other" line.
b. Lead Agency: Enter which organization leads this cluster or working group in your country, e.g. UNHCR, WHO, etc.
c. Enter details of meetings and who from ADRA is primarily responsible for attending the meetings.
The foundational principle for this section is that every ADRA Office must have a knowledge and understanding of the response and coordination mechanisms for emergency response within their country and engage with key stakeholders before a disaster event.

Cluster, Government, Working Groups/Platform	Lead Agency	Does ADRA attend meetings?	Frequency of meetings	Staff Member Representing ADRA	Notes/Comments
National Security Roundtable	UNHCR	Yes	Semiannual	Guillermo Paredes	
National Lodging Bureau	UNHCR	Yes	Bimonthly	April Paez	
Cash working group	UNHCR	Yes	Monthly	Sebastian Gonzalez	
Mexico City Protection Board	UNHCR	Yes	Bimonthly	Sebastian Gonzalez	
Cluster Wash Tapachula	UNICEF	Yes	Monthly	José Arguello	

Tapachula Protection Board	UNHCR	Yes	Monthly	José Arguello	
Tapachula Humanitarian Response Table	ADRA	Yes	Monthly	José Arguello	
Migrant Service Bureau (CBP) in Tapachula	State Government	Yes	Monthly	José Arguello

Other:						
Other:						

3. Response Plan

3.1 Response Criteria

Every ADRA Office must have a knowledge and understanding of the response and coordination mechanisms for emergency response within their country. The purpose of this section is to identify what the initial triggers (criteria) are for the activation of the NEMP. This section identifies the criteria that must be met for the activation of the plan. These criteria fall into two categories: those identified by the ADRA country office and those required by ADRA International. The criteria required by ADRA/I have already been entered into the NEMP. The criteria determined by the Country Office will be specific to that office only. For example, the office might decide to only respond to emergencies that happen in certain parts of the country.

ADRA	[Mexico] will respond to an emergency when the following criteria are met:
1	At least 2,000 people have been directly affected.
2	The response will provide assistance to at least 180 directly affected families.
3	The emergency occurred within the last 48 hours in the case of sudden events (earthquakes, hurricanes, etc.) and at any time in the case of slow onset events (droughts, etc.).
4	The total budget available is $25,000 USD, with contributions from ADRA International ($14,000 USD), ADRA Inter-America ($8,000 USD) and the local Union ($3,000 USD).
5	Trained, skilled and available personnel are available to be mobilized to the emergency area to coordinate the response.
6	The affected population has needs aligned with one of the response scenarios.
7	The emergency occurred within the national territory.
8	The national office has physical access/authorization to the affected area.
9	
10	

3.2 Rapid Needs Assessment (RNA) Plan

A RNA provides information on which to base decisions to ensure the best assistance is provided to those most in need at the right time. To enable this an office should plan in advance for a RNA. Note that whenever possible, joint needs assessments undertaken with other agencies involved in the emergency response are preferable to avoid duplication and community disturbance and to reduce costs.

RNA Tools Available	For assessments with primary data sources: ADRA Rapid Needs Assessment (RNA) questionnaire and RNA report formats. For assessments with secondary data sources: government r e p o r t s , UN agencies, humanitarian organizations, media, etc.
Timing of Needs Assessment	To be performed in the first 24 hours after the Emergency occurs (Sudden Events).

	Name	Role(s)
Needs Assessment Team Members	Jennifer Esparza	Interoceanic Emergency Coordinator
	Roel Cea	North Emergency Coordinator
	Alejandro Castillo	Southeast Emergency Coordinator
	Edgar Benitez	Center Emergency Coordinator
	Luis Ivan Reyes	Emergency Coordinator Chiapas
	Yatziri Ponce	National Emergency Coordinator

Needs Assessment Processes	The NEMP will be activated based on secondary data (CAT 1 emergencies according to ADRA classification criteria) and primary data (CAT 2, 3 and 4 emergencies). In the latter case, ADRA Mexico will send a team to the affected area within 24 hours of the emergency (access permitting) to conduct the assessment. The needs assessment process will follow these steps: -Visit to the affected area by the evaluation team. -Interviews with key informants (affected population, government agencies, civil society, etc.). Participation in inter-institutional coordination meetings that are already operational (Emergency Operations Committee, etc.). Data collection and analysis with the following tool: https://ee-eu.kobotoolbox.org/x/8e4OjCol -Preparation of the evaluation report.
Needs Assessment Report	The needs assessment report should be a document approved by the National Office and, if required, can be shared with other organizations that are attending to the emergency, in order to avoid duplication of actions and to better coordinate the intervention for the emergency presented. For CAT 2, 3 and 4 sudden-onset disasters, ADRA Mexico will submit a rapid needs assessment report to ADRA IAD within 72 hours of the disaster using the assessment report format provided by ADRAIAD. -For slow onset disasters (droughts, migration crises, etc.), the assessment report may be submitted at any time. -An evaluation report will not be required for CAT 1 disasters.

National Emergency Management Plan: ADRA [Mexico].

3.3 Personnel Resources for the National Emergency Response Team (ERT)

To enable an effective and coordinated response, ADRA has developed a management tool known as the Emergency Response Management System (ERMS). In advance of an emergency the best qualified staff members are assigned to each of the roles identified in the ERMS structure. Based on this allocation, staff member capacity can be enhanced for their assigned role.

Complete the table identifying the role(s) that staff members could be assigned within the ERMS structure and any specific technical skills staff members have.
*The ERT roles are: Communications, ERC, Finance, HR, Logistics, Planning, Programs, REC, Safety & Security, and PSS Support.

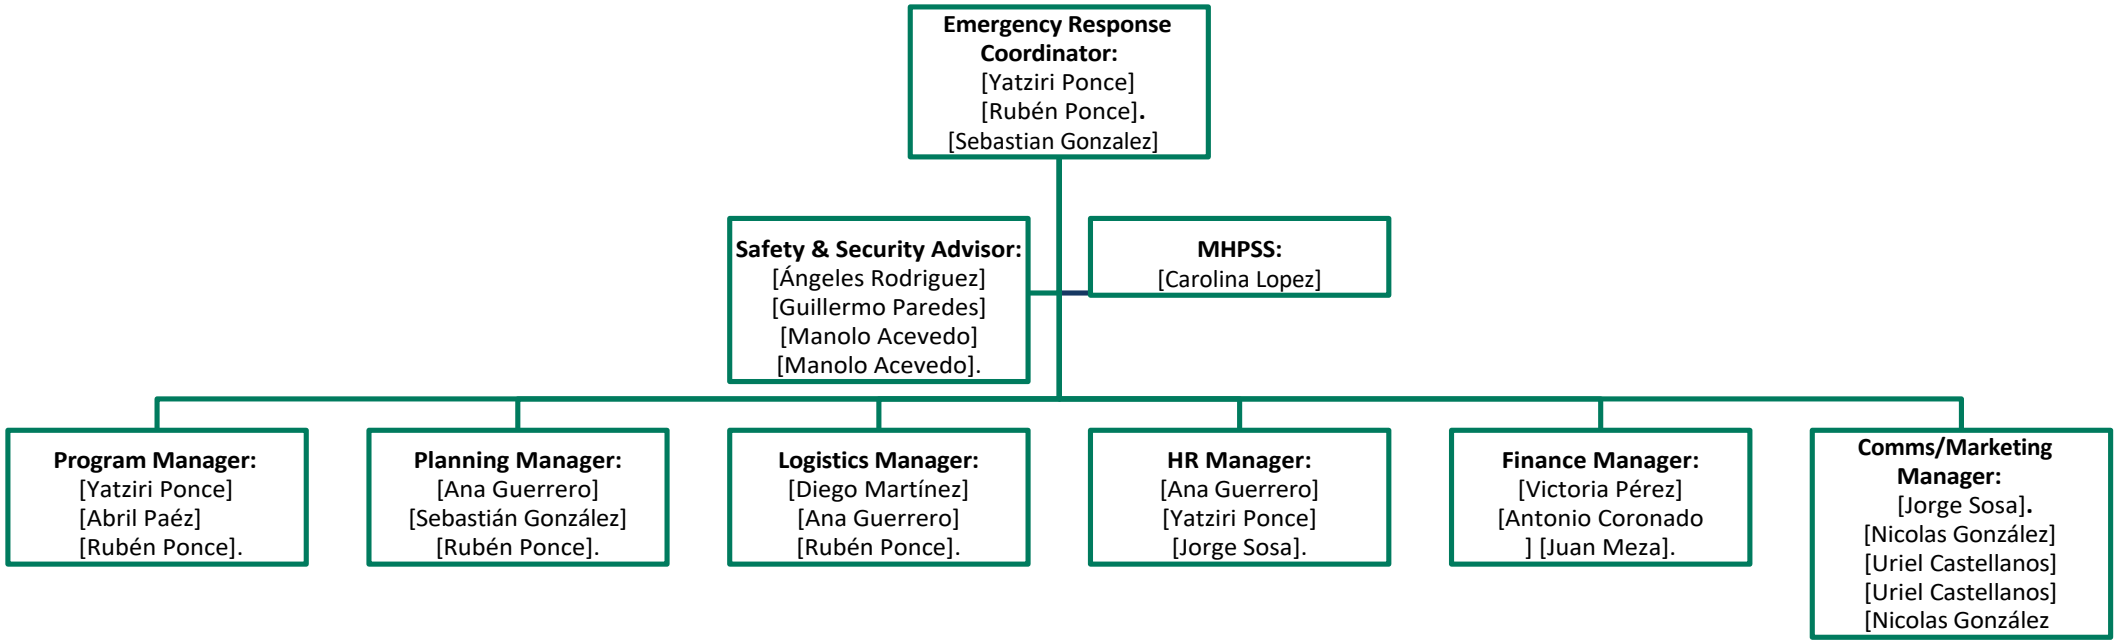

Please refer to the EM Operations Manual for a full ERMS organization chart and job descriptions.

		Specific skills additional to the ERMS position staff would fill

Based on your staff capacity analysis above, add names to the chart below for each ERMS role. Double click each role and add name(s) following the job title.

NEMP Scenario Guidelines

Development of Intervention Scenarios:
Each Country Office must formulate a maximum of three intervention scenarios, akin to pre-approved mini-proposals for initial responses.
Each scenario must address a singular sector, with Scenario 1 specifically designated for CVA (Cash Voucher Assistance).

Adherence to Approved Interventions:
Deviating from the intervention approved in the NEMP (National Emergency Management Plan) necessitates completion and approval of an initial response budget and proposal.

Implementation Duration:
Scenarios must be implemented within a maximum period of 60 days, although they are typically executed over shorter durations.

Submission of Final Reports:
A final report from the Country Office is mandatory within 30 days of the project's completion.

Scalability of Interventions:
All interventions must be scalable to accommodate varying needs and circumstances.

Selection Criteria:
Intervention choices should leverage the existing strengths and expertise of the Country Office.

Budgetary Allocation:
The total budget per intervention is capped at USD$20,000, unless specified differently by a regional office. The allocation breakdown is as follows:
$14,000 from ADRA International.
$3,000 from the Regional Office.
$3,000 from the Country Office or local Union.

Other Costs and Overheads:
Total Other Costs should not surpass one third of the intervention's total value. Any savings should be redirected to increase the beneficiaries. The total material/services costs that go directly to beneficiaries should account for at least67% of the total project budget. The maximum overhead chargeable to the budget is 5% of total direct costs.

Minimum Beneficiary Reach:
Each scenario must provide assistance to a minimum of 75 households.

National Emergency Management Plan: ADRA [Mexico].

Intervention Scenario #1 **Type of Intervention:** Cash

1	Description of what may cause the need for the intervention	Cash transfers can be provided to facilitate access to essential goods and services for people affected by disasters as well as to support their early recovery efforts. This type o f assistance can be provided in response to any type of disaster, whether sudden or slow onset, man-made (war, chemical disasters, etc.) or natural (hydrometeorological, geodynamic, sanitary, etc.).
2	What assistance will the affected population receive?	ADRA will provide a one-time cash transfer in the amount of $1,800 MXN ($102 USD) per household. The amount is equivalent to the basic food basket for a family of 4 (Source: https://www.coneval.org.mx/Medicion/MP/Paginas/Lineas-de-bienestar-y-canasta-basica.aspx) and is in line with the recommendation of the Cifra Cash Working Group in Mexico. -However, values may vary depending on the number of beneficiaries, the operational context of the emergency and the resources available. - Whenever possible, assistance will be provided in proportion to the number of members of the family group, based on a scale established by ADRA Mexico.
3	Beneficiaries: Number, selection criteria, registration	The Project will assist 180 families (720 people). The selection and registration process will be as follows: 1) Geographic identification of the affected area in coordination with the Government and other humanitarian actors, 2) Determination o f selection criteria within the affected area (context-specific criteria, socio-economic level criteria, criteria for groups with specific vulnerabilities), 3) Beneficiary selection: request lists of beneficiaries/evacuees registered by the government; filter the lists according to ADRA's selection criteria; invite beneficiaries to the registration event, 4) Registration of beneficiaries at an event organized by ADRA.
4	Intervention objective and indicators	Facilitate access to essential goods and services through the distribution of cash assistance to 180 families (720 people) [Indicator C1 & C5).
5	Human resources required for the intervention	In NEMP activation projects (USD 25,000), the ERT team may be reduced, with people assuming more than one function. For the implementation of this project, the base team will be as follows: (1) Emergency Response Coordinator (ERC) (1) Planning / program manager (1) Financial Manager who will also provide logistical and HR support. (1) Communication Manager (10) volunteers ADRA will conduct a market analysis using the tools in the NEMP Response Scenario Cash Transfer Guidance for NEMP Response Scenarios developed by the ADRA Network's CASH TLL.
6	Identify steps to be taken to ensure market functionality	The financial provider is the company UP SI VALE (www.sivale.mx).
7	Likely service providers for cash transfers	The default mechanism used to provide cash assistance will be through the delivery of pre-loaded cards provided by the financial services provider with which ADRA has a long history of cooperation in Mexico. However, ADRA may choose alternative mechanisms when the provider does not have the required operational capacity in the area affected by the emergency. The alternative mechanisms may be: 1) bank transfers, 2) checks, 3) gift cards, 4) telephone transfers (mobile money), among others.
8	Identify the delivery mechanism for the transfer of cash	
9	Identify security measures if actual cash is distributed	Due to local regulations, ADRA Mexico will never distribute cash in hand to beneficiaries.
10	Intervention timing: duration, how soon after the disaster	Distribution activities will commence within 7 days of approval of the NEMP activation request. The project will last a maximum of 30 days from NEMP approval. The final project report will be submitted to ADRA IAD within 30 days of the project completion date listed on the NEMP activation form.

National Emergency Management Plan: ADRA [Mexico].

Intervention Scenario #2		Type of Intervention: WASH
1	Description of what may cause the need for the intervention	Man-made disasters (conflict, chemical, etc.) or natural disasters (geodynamic, hydro-meteorological, sanitary, etc.), whether sudden or slow-onset, can create gaps in access to personal hygiene items. When the delivery of cash assistance and/or vouchers is not possible because markets cannot supply these items to the affected population, ADRA will activate this scenario to facilitate access to these items.
2	What assistance will the affected population receive?	ADRA will distribute a **personal hygiene kit** in accordance with SPHERE Standards (WASH Technical Chapter, Standard 1.2) and calculated to cover the hygiene needs of a family of (4) members for one month. The volume and quantity per item are described in the quotation. ADRA may make modifications to the standard composition of the kit according to the context, local market availabilities and cultural preferences of the affected population as indicated in the Sphere Manual Hygiene Promotion Standard 1.2 Key Actions.
3	Beneficiaries: Number, selection criteria, registration	**The project will benefit 280 families (1,120 people).** After identifying the affected area, ADRA will register the beneficiaries according to the established selection criteria, always prioritizing the assistance only according to the humanitarian needs of the affected population. Beneficiary registration will be carried out prior to distribution through the mechanisms best suited to the context (prior house-to-house visit, visit to temporary shelters, etc.). At the time of registration, ADRA will inform the beneficiary of the place and time of distribution.
4	Intervention objective and indicators	Facilitate access to 280 families (1,120 people) affected to personal hygiene items to ensure their well-being, dignity and health for one month (Indicator W3).
5	Human resources required for the intervention	In NEMP activation projects (USD 25,000), the ERT team may be reduced, with people assuming more than one function. For the implementation of this project, the base team will be as follows: (1) Emergency Response Coordinator (1) Planning/Program Manager (1) Communication Manager (1) Finance/HR/HR/Logistics Manager (10) Volunteers to support beneficiary registration and kit preparation and distribution.
6	Identify steps to be taken to ensure market functionality	In emergency situations, it will be crucial to continuously assess the needs of the population through surveys, observations and local reports. In addition, it will be essential to report on the availability of goods and services through mass media and social networks to ensure that information is timely and accessible.
7	Packaging & warehousing arrangements	Whenever possible, supplies should be transported from the supplier's warehouse to ADRA's distribution point. If the distribution point does not have a warehouse, supplies will be transported to the nearest ADRA office or church building (school, church, etc.) for safe receipt and assembly until they are transported to the distribution area. The kits must be packaged with ecological material (cardboard box, cloth bag, biodegradable bag). The use of plastic bags for packaging is not accepted. The packaging must be identified with the ADRA logo.
8	Transport arrangements	ADRA Mexico's logistics manager will be in charge of transporting the assembled kits to the assigned distribution point. If ADRA Mexico cannot count on the logistical support of partners and allies (Army, Government, etc.), ADRA Mexico will contract a transportation service.
9	Distribution procedures	The distribution process will be as follows: - Identification of the distribution point in consultation with the community and based on a risk analysis. - Notification to the beneficiary population of time and place of distribution - Preparation of the distribution point (Gazebos, chairs, tables, water, ADRA signage, etc.) - Transport of supplies to the point of distribution - Establishment of a complaints and suggestions mechanism (mailbox, telephone line, etc.). - Opening of the distribution and reception of beneficiaries - Registration of beneficiaries (digitally or physically) prior to kit delivery to ensure proper accountability. - Post-distribution monitoring exercise. Distribution activities will commence within 7 days of approval of the NEMP activation request. The project will last a maximum of 30 days from the approval of the NEMP. The final project report will be submitted to ADRA IAD within 30 days of the project completion date listed on the NEMP activation form.
10	Intervention timing: duration, how soon after the disaster	

National Emergency Management Plan: ADRA [Mexico].

Scenario 2 Budget — **Type of Intervention: WASH**

MATERIAL COSTS

Local Currency Name:	Weights	Local currency for 1 USD:	17,52

5. Preparedness Check List

Human Resources	
☑	First aid kits are available for staff in all vehicles and offices
☑	A communications plan is in place in line with the ADRA Crisis Communications Handbook
☑	Communication equipment is operationally ready (e.g. satellite phone, radios, etc.), regularly checked and in good working state (spare batteries are stored).
☑	A complete and up-to-date list of all staff contact information is readily accessible and has been communicated to all office staff
☑	The Emergency Response Coordinator and all members of the National ERT have access to ENET and know their passwords.
☑	All standard HR forms are backed up on an external hard drive or USB, or accessible via cloud storage
The following items will be achieved if an office is compliant with AAL requirements (No need to submit further documentation.)	
1	An Emergency Response Team structure is in place (including sector and functional specialists)
2	Key Contact List (internal and external) are available and updated (Government bodies, UN bodies, partner NGOs, etc.)
3	A safety and security plan is in place
4	All staff and volunteers are trained and insured (AD & D) (include insurance certificate as an appendix)
5	Volunteers receive role descriptions and a written document (translated in their language) clearly outlining their role and compensation mechanisms (including office policy document as an appendix)
6	HR and Staff Care Policies for Emergency Response are in place
7	The Red Cross Code of Conduct has been signed by the country office (include copy in appendix)
8	Members of the National Emergency Response Team have received training on & will apply accountability standards, among which: - Core Humanitarian Standards - The Sphere Project - The Good Enough Guide - Protection (including children protection)
9	All employees have signed the "ADRA Code of Ethics for Employees and Related Personnel" and received a copy of the "ADRA Protection Policy: including Gender-Based Violence & Sexual Exploitation & Abuse".
10	NFIs/relief supplies pre-positioned or agreements with suppliers are in place
11	It is known and agreed as to which offices will fund, and how much, an Initial NEMP Response (Division/Union/Conference, Regional & International)
12	Program and Project staff understand and are able to apply ADRA's Emergency Management Policies & Procedures
13	Members of the National Emergency Response Team have received training on international humanitarian laws
14	Rapid assessment tools are available & rapid assessment team trained
